

Connecting an Android Device to the Wireless Network

These steps show how to connect an Android device to the school's wireless network. This has been tested with Android 4 and Android 2.3

1. With your Wi-Fi turned on, search for available wireless networks.
2. Choose the "QM-BYOD" Wireless network to connect to
3. In the window which opens scroll down and find the "Identity" and "Password" fields

4. In the "Identity" field enter your school username
5. In the "Password" field enter your school network password
6. Click "Connect"
7. You should now connect to the wireless network

When you change your school network password, you will need to also change the password with which you are connecting to the wireless network with in step 5
