

Connecting an OSX Device (Mac Book) to the Wireless Network

These steps show how to connect an OSX device to the school's wireless network.

1. With your Wi-Fi turned on, select the QM-BYOD Wi-Fi to connect to
2. In the "Username" field enter your school username
3. In the "Password" field enter your school network password

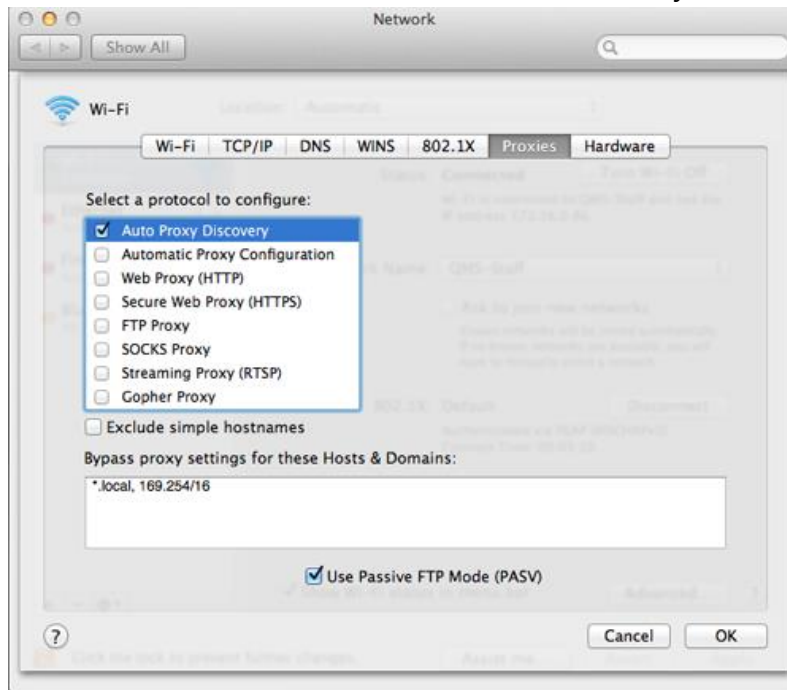

4. You should then see a screen like the one below. Click "Continue" to accept the certificate

5. You should now connect to the wireless network
6. Load "System Preferences" and load the "Network" settings
7. For the network just joined click the "Advanced" button at the bottom of the screen

8. Click the “Proxies” tab and make sure that “Auto Proxy Discovery” is selected

9. Click “OK” and then “Apply” and then close the network preferences window

When you change your school network password, you will need to also change the password with which you are connecting to the wireless network with in step 3
