

Connecting an iOS Device (iPhone or iPad) to the Wireless Network

These steps show how to connect an iOS device to the school's wireless network. This has been tested with an iPhone 5 and an iPad 3

1. With your Wi-Fi turned on, go into your device settings menu.

2. Select the Wi-Fi menu
3. Choose the "QM-BYOD" wireless network to connect to
4. In the "Username" field enter your school username
5. In the "Password" field enter your school network password

6. You should then see a screen like the one below. Click "Accept" to accept the certificate

7. You should now connect to the wireless network

8. Click the blue arrow next to the network just joined to view network settings
9. Select “HTTP Proxy” to “Auto”

When you change your school network password, you will need to also change the password with which you are connecting to the wireless network with in step 5
